AI Mock Interview

Global Score

0/ 10
Avg. Score

UNSATISFACTORY

Lacks fundamental knowledge; not suitable for role.

Total Task	1
Task Attempted	1
Time Taken	9 minutes 10 seconds

Skills Performance

1. One On One

Task Wise Performance

One On One

The candidate's performance was significantly below expectations for a Software Engineer role at Google. The candidate demonstrated a lack of fundamental knowledge in data structures, algorithms, system design, and problem-solving. The candidate's inability to answer basic questions and repeated requests for repetition suggest a lack of preparation and understanding of core concepts. The candidate is not suitable for the role and requires significant improvement in all assessed areas.

0
Score

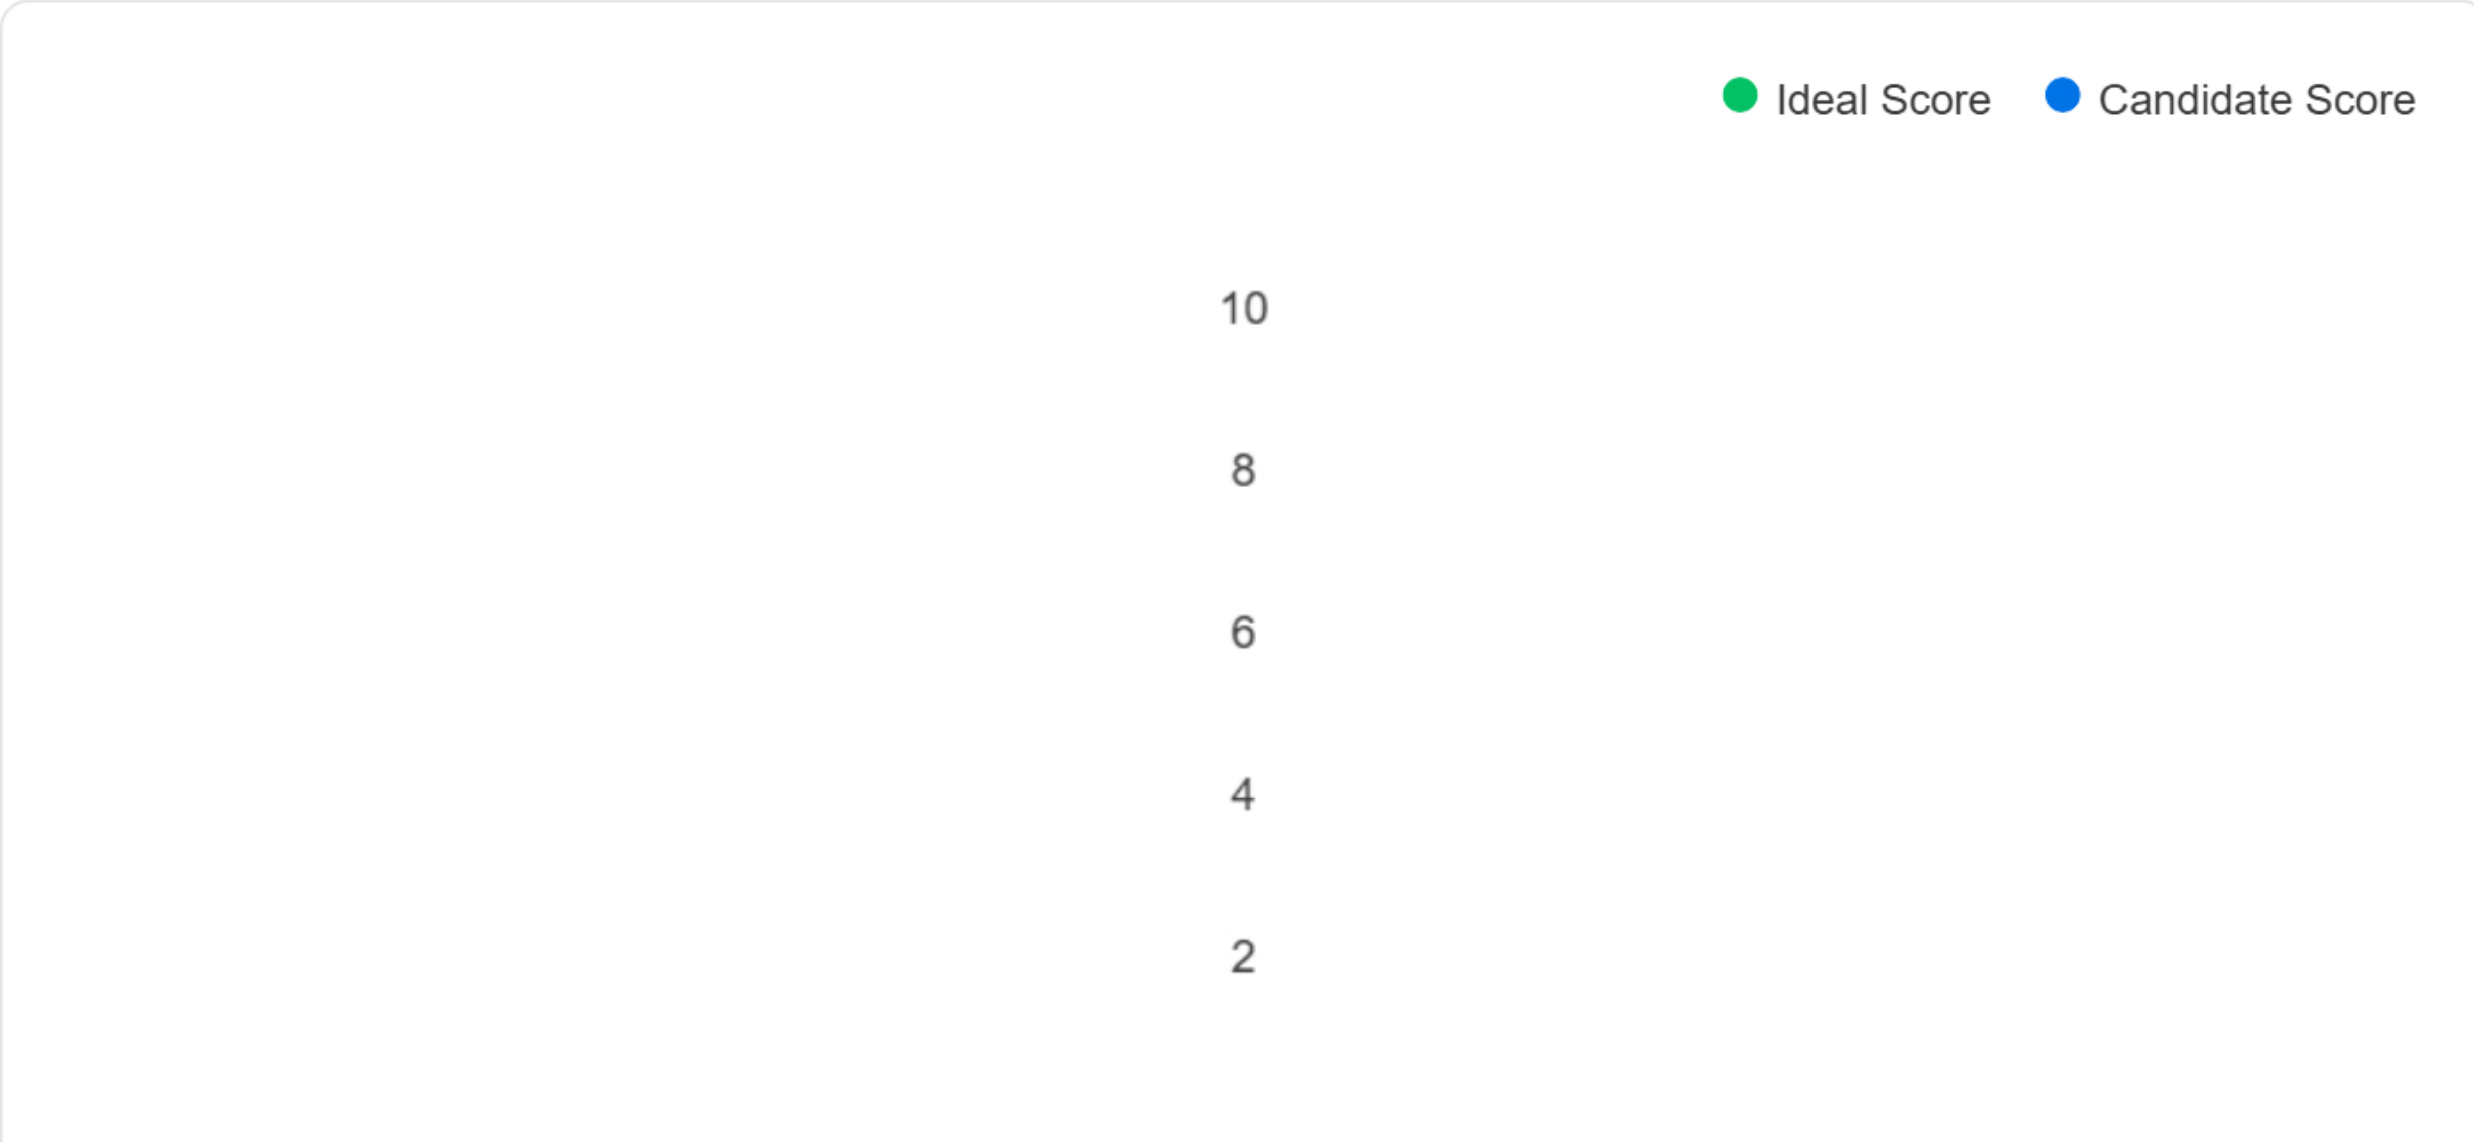
Key strengths

- The candidate correctly identified Heap as a suitable data structure for a priority queue.

Area of Improvement

- Lack of fundamental understanding of data structures and algorithms.
- Inability to explain reasoning behind choices.
- Poor understanding of system design principles.
- Inability to answer basic programming questions.
- Difficulty with problem-solving scenarios.
- Repeated requests for questions to be repeated.
- Lack of preparation for the interview.

Skill Summary



Overall Feedback

The candidate's performance was significantly below expectations for a Software Engineer role at Google. The candidate demonstrated a lack of fundamental knowledge in data structures, algorithms, system design, and problem-solving. The candidate's inability to answer basic questions and repeated requests for repetition suggest a lack of preparation and understanding of core concepts. The candidate is not suitable for the role and requires significant improvement in all assessed areas.

AI Interview Questions Transcript

Candidate Response

Yeah. Could you please repeat the question?

Unstop Bot

Certainly. Could you briefly walk me through your professional journey and background?

Candidate Response

Ya, uh.

Candidate Response

Hello uh myself Sanjay Sharma, uh I am currently uh pursuing Btech and currently I'm in 3rd year and uh I'm pursuing computer science branch and want to get internship in Google.

Unstop Bot

Great to hear you're interested in an internship at Google. What specifically attracts you to this opportunity?

Candidate Response

Because I am tech enthusiastic and I love learning technologies and building.

Candidate Response

Projects that I like so its a Google is a great place to work where I can build my career.

Unstop Bot

I understand. Let's dive into some technical questions now. Which of the following data structures would be most suitable for implementing a priority queue? a) Array b) Linked List c) Heap d) Hash Table

Candidate Response

Sorry, could you please repeat the question?

Unstop Bot

No problem. Which of the following data structures would be most suitable for implementing a priority queue? a) Array b) Linked List c) Heap d) Hash Table

Candidate Response

I think heap.

Unstop Bot

Okay, can you explain your reasoning for choosing a heap?

Candidate Response

Heap.

Unstop Bot

Can you explain your reasoning

Candidate Response

Because.

Unstop Bot

Okay,

Candidate Response

Hello.

Unstop Bot

Yes, I'm listening. Can you explain why you think a heap is the best choice for a priority queue?

Candidate Response

Yeah, I tell you, I think it is because I have read it somewhere.

Unstop Bot

I see. Let's move on to the next question. Which of the following is the primary goal of load balancing in a distributed system? a) To increase network latency b) To evenly distribute traffic across servers c) To reduce the number of servers d) To introduce single points of failure

Candidate Response

Option D.

Unstop Bot

You selected option D, "To introduce single points of failure." Could you elaborate on your reasoning for

Candidate Response

No, uh, no. Uh, this is wrong actually. Uh, could you please repeat the question?

Unstop Bot

Certainly. Which of the following is the primary goal of load balancing in a distributed system? a) To increase network latency b) To evenly distribute traffic across servers c) To reduce the number of servers d) To introduce single points of failure

Candidate Response

You mean?

Unstop Bot

Yes, I repeated the question. Please select the option that you believe is the primary goal of load balancing.

Candidate Response

Yeah, its option B to evenly distribute the load.

Unstop Bot

Great. Can you explain why evenly distributing traffic is the primary goal?

Candidate Response

Because what happens when the users or the traffic gets high on the website, the the website becomes slow down. It slow downs the website as a result what the load balancer do it it?

Candidate Response

Distribute it evenly distributes the request, the incoming request.

Candidate Response

Emily distributes the incoming request to the servers so that the site run smoothly.

Unstop Bot

That's a good explanation. Let's try another question. Consider the following code snippet (in pseudo-code): ``` function processData(data): for item in data: if item > 10: print(item) ``` What is the time complexity of this function, assuming 'data' is an array of 'n' elements? a) O(1) b) O(log n) c) O(n) d) O(n^2)

Candidate Response

Sorry, I don't know.

Unstop Bot

No problem. Let's move on to a more open-ended problem-solving question. Describe a situation where you would choose a breadth-first search (BFS) algorithm over a depth-first search (DFS) algorithm. Why would BFS be more appropriate in that scenario?

Candidate Response

That is the next question you asked.

Unstop Bot

Yes, that's correct. Can you answer it? Describe a situation where you would choose a breadth-first search (BFS) algorithm over a depth-first search (DFS) algorithm and why BFS would be more appropriate?

Candidate Response

No, Sir, I don't know.

Unstop Bot

Okay. Let's try a different kind of question then. Imagine you're designing a system for recommending movies to users. Describe your approach to this problem, considering factors like data storage, algorithm choice, and scalability.

Candidate Response

Could you please repeat?

Unstop Bot

Sure. Imagine you're designing a system for recommending movies to users. Describe your approach to this problem, considering factors like data storage, algorithm choice, and scalability.

Candidate Response

Please repeat the question again.

Unstop Bot

Imagine you're designing a system for recommending movies to users. Describe your approach to this problem, considering factors like data storage, algorithm choice, and scalability.

Unstop Bot

If you can hear me, please confirm you're still there.

Candidate Response

Yeah, I am here. I don't know this.

Unstop Bot

Alright. Let's move on to a different type of scenario. I'm going to switch roles here. (As Harsh, a very unhappy user): "I've been using your company's online photo storage service for years, and suddenly, all my vacation photos from last summer are gone! Vanished! I contacted support, and they told me they're 'looking into it,' but this is completely unacceptable. These are precious memories, and I need them back! What are you going to do about it?"

Candidate Response

Sir, please repeat.

Unstop Bot

(As Harsh, a very unhappy user): "I've been using your company's online photo storage service for years, and suddenly, all my vacation photos from last summer are gone! Vanished! I contacted support, and they told me they're 'looking into it,' but this is completely unacceptable. These are precious memories, and I need them back! What are you going to do about it?"

Candidate Response

Sorry Sir, I don't know about it

Sorry Sir, I don't know about it.

Unstop Bot

Okay, we will move to the next phase. Tell me about a time you faced a significant technical challenge while working on a project. What were the obstacles, and how did you overcome them?

Candidate Response

Bye bye.

Unstop Bot

That concludes the interview. Please click the End Interview button to finish. We appreciate your time and wish you all the best.

Candidate Response

Will I get selected for the interview?

Unstop Bot

That concludes the interview. Please click the End Interview button to finish. We appreciate your time and wish you all the best.
